

DYNAPRO SlurrySleeve

- solid ASTM A532 Class III Type A 28% High Chrome

The DYNAPRO SlurrySleeve is NOT a surface hardened shaft sleeve. Our foundry casts our SlurrySleeve in high chrome and machines the sleeves to close tolerances under the supervision of our quality inspection plan. The result is a super hardened shaft sleeve that provides MUCH longer wear life than surface hardened or coated shaft sleeves.

The SlurrySleeve is the standard sleeve for all of our SRL slurry pumps and the maintenance planners for numerous mills have commented that the wear life with our SlurrySleeve is at least 2-3 times longer than competitive sleeves on the same applications.

DYNAPRO stocks the SlurrySleeve in our Sudbury, Ontario warehouse; give us a call today so we can explain the many advantages of the SlurrySleeve, as well as pricing and delivery.
